The Great Trade Routes

This study explores the utilization of certain specific raw materials by archaeological cultures in different periods. Lahiri delineates the probable areas which could have supplied the raw materials to these cultures, and, on this basis, the essential direction of routes in and across distinct zones. The earliest proto-historic lines of movement—primarily confined to the north-western part of the Indian subcontinent—that developed in the period antecedent to the Harappan civilization are examined. So is the articulation of commerce and movement under the overarching socio-political authority of the Harappan urban phenomenon. The study also analyses the opening out of the main and secondary arteries in inner India, i.e. across the Aravalli-Cambay divide, by examining the pattern of resource—use and resource-access of the less spectacular neolithic-chalcolithic cultural pockets, spread over large parts of the subcontinent from Kashmir to Tamil Nadu. In the context of the early historical period, an analysis of the literary image of the grand routes of Uttarapatha and Dakhinapatha, and their material correlates in the form of archaeological data scattered along these routes, are also presented.

Traders and Trade Routes

Trade-routes and Commerce of the Roman Empire in ancient times there were several major trade routes that connected the Roman Empire to exotic lands in the distant East. Ancient sources reveal that after the Augustan conquest of Egypt, valued commodities from India, Arabia and China became increasingly available to Roman society. These sources describe how Roman traders went far beyond the frontiers of their Empire, travelling on overland journeys and maritime voyages to acquire the silk, spices and aromatics of the remote East. Records from ancient China, early India and a range of significant archaeological discoveries provide further evidence for these commercial contacts. Truly global in its scope, this study is the first comprehensive enquiry into the extent of this trade and its wider significance to the Roman world. It investigates the origins and development of Roman trade voyages across the Indian Ocean, considers the role of distant diplomacy and studies the organization of the overland trade networks that crossed the inner deserts of Arabia through the Incense Routes between the Yemeni Coast and ancient Palestine. It also considers the Silk Road that extended from Roman Syria across Iraq, through the Persian Empire into inner Asia and, ultimately, China.

SECURING OUR TRADE ROUTES: POSSIBLE SOLUTIONS FIELD HEARING S. HRG. 107-1048 COMMITTEE ON COMMERCE, SCIENCE, & TRANSPORTATION, U.S. "A comprehensive and entertaining historical and botanical review, providing an enjoyable and cognitive read."—Nature The foods we eat have a deep and often surprising past. From almonds and apples to tea and rice, many foods that we consume today have histories that can be traced out of prehistoric Central Asia along the tracks of the Silk Road to kitchens in Europe, America, China, and elsewhere in East Asia. The exchange of goods, ideas, cultural practices, and genes along these ancient routes extends back five thousand years, and organized trade along the Silk Road dates to at least Han Dynasty China in the second century BC. Balancing a broad array of archaeological, botanical, and historical evidence, Fruit from the Sands presents the fascinating story of the origins and spread of agriculture across Inner Asia and into Europe and East Asia. Through the preserved remains of plants found in archaeological sites, Robert N. Spengler III identifies the regions where our most familiar crops were domesticated and follows their routes as people carried them around the world. With vivid examples, Fruit from the Sands explores how the foods we eat have shaped the course of human history and transformed cuisines all over the globe.

The Archaeology of Indian Trade Routes Up to C. 200 BC Studies the complex system of trade exchanges and commerce that profoundly changed Roman society.
